SUBJECT / TITLE :	**UNIVERSAL CONTACT Z SERIES**	

1 The Products Summary

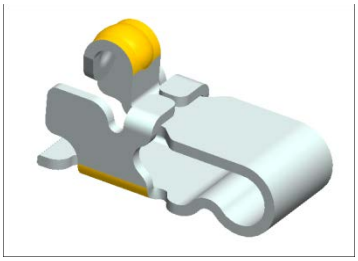

The Universal Contact Z series comprises of a metal beam manufactured using a Titanium Copper alloy. The beam is formed up into a protective box provided by the two side wings, which guide the beam within its operating stroke. These side wings are also used to maintain pre-load to the beam in its unmated condition. The contact point of the beam incorporates a 'domed' surface to maintain a high 'hertz stress' contact and good contact resistance.

5Hz to 9Hz @ 1.5mm pk Displacement
9Hz to 200Hz @ 0.5g pk Acceleration
1 Oct per minute; 1 Hour per axis. 3 Axis total.

≥2.5 mm	250 +0 °C *	245 +0 °C *	245 +0 °C *
* Tolerance: The device manufacturer/supplier **shall** assure process compatibility up to and including the stated classification temperature (this means Peak reflow temperature +0 °C. For example 260 °C+0°C) at the rated MSL level.			

Note 1: The profiling tolerance is + 0 °C, -X °C (based on machine variation capability) whatever is required to control the profile process but at no time will it exceed - 5 °C. The producer assures process compatibility at the peak reflow profile temperatures defined in Table 4.2.

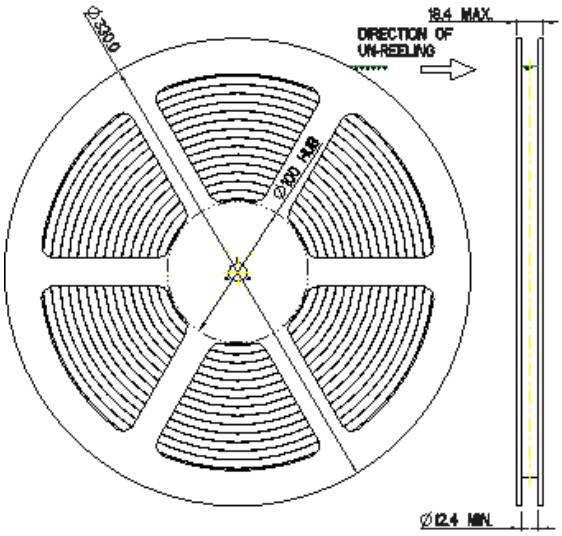

Note 2: Package volume excludes external terminals (balls, bumps, lands, leads) and/or nonintegral heat sinks.

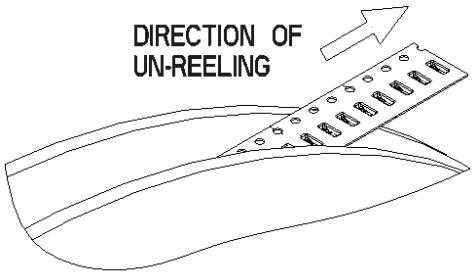

Note 3: The maximum component temperature reached during reflow depends on package thickness and volume. The use of convection reflow processes reduces the thermal gradients between packages. However, thermal gradients due to differences in thermal mass of SMD packages may still exist.

Note 4: Components intended for use in a "lead-free" assembly process **shall** be evaluated using the "lead free" classification temperatures and profiles defined in Tables 4-1, 4.2 and 5-2 whether or not lead free.
